Office Action Summary	Application No. 10/709,828	Applicant(s) TAYLOR ET AL.	
	Examiner GREGORY A. ANDERSON	Art Unit 3773	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 1-3 and 5-7 is withdrawn in view of the newly discovered reference(s) to Taylor 20010020189. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Taylor 20010020189.

Taylor discloses a device comprising: inner 87 and outer 83 elements defining an ingestion chamber with a proximal entry opening and a distal exit opening to limit a rate of efflux (Fig. 5); a plurality of openings in the outer element for protrusion of stomach lining to the inner element (Fig. 5); wherein the inner element includes a plurality of retention members 27 to hold the protruding stomach lining, whereby the device is secured to the stomach lining; and wherein the inner and outer elements are frustoconically tapered from a relatively larger proximal radius to a relatively smaller distal radius (Fig. 5). Taylor further discloses the inner and outer elements comprise nested baskets (Fig. 5). Taylor further discloses the openings are formed by a mesh in the outer element (Fig. 5). The inner and outer elements are inherently rotatable to

some degree with respect to each other. The retention members are inherently releasable. Taylor further discloses a distal end ring in the outer element, and a proximal end ring in the inner element (Fig. 7).

Allowable Subject Matter

4. Claims 4 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 10, 13, and 15-17 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: Taylor fails to disclose a plurality of spikes mounted tangentially on the inner basket adjacent mesh openings in the outer basket. The closest prior art is Cassell 6,666,873 in which flexible spikes are used to attach an anastomotic ring to tissue, however, these spikes are not actually tangentially mounted and are instead flexible in a tangential direction. Therefore, the prior art of record and the prior art at large, alone or in combination, does not teach the tangentially mounted spikes and thus the claims are allowed.
